The new economy of app development

Build apps or autonomous workflows with reusable, shareable integrations connecting any service, app, blockchain or decentralized network.

Our vision

To be the first universal infrastructure to bridge legacy companies moving into a trustless landscape. The future of business is decentralized.

Blockchain integration is costly and time-consuming

With MESG, connect to the blockchain components your business needs, while avoiding the constraints of full adoption.

Expanding a business involves costly tech overhauls

MESG is a solution-building platform that doesn't limit a customer to a predefined channel of growth. Implement the features you need, when you need them.

IoT usefulness is limited by incompatibility

MESG allows previously incompatible devices to exchange information, creating a new world of business opportunities.

Revenue Model

All users stake tokens to access the MESG Network.

Miners, who support the network, stake tokens as collateral.

Developers are rewarded each time their connections are used.

As more tokens are staked, supply decreases resulting in token scarcity.

Algorithmic Token Distribution

Token supply   250,000,000

Sale distribution	62,5%
Reserve	20%
Team and Founders	12,5%
Partners & Bounties	5%

Roadmap

2019

Q1

MESG Token ERC20
MESG Token release with a total supply of 250MM
Start the Algorithmic Token Distribution
List MESG Token on the first exchange

Q2

MESG Marketplace on Ethereum
Sell MESG Services on the MESG Marketplace
Buy MESG Services to integrate into applications
Marketplace to buy and sell access to MESG Services

Algorithmic Token Distribution
List MESG Token on a second exchange
Dashboard with information to check the distribution

Q3

Workflows
Create applications based on workflows
Connect MESG Services together to build rich applications
Drastically reduce applications' codebase

Decentralized executions
MESG Marketplace on the native network
Decentralized execution of services

Testnet
Native MESG Token
Proof of Stake consensus

Q4

MESG user interface
Visualize your executions
Manage your MESG Wallet
Synchronize the Decentralized Network of Services

Exchange listing
Tier-2 exchange

2020

Q1

Mainnet
Audited source code
MESG Economy stabilized

XX

Iterate over and over
Feature updates based on the community feedback
More and more partners
New exchanges
Improve performance
